

system orange

A fully automatic configuration combining high performance with maximum ease of use and a short payback period. The ideal winding system for adhesive materials.

Applications: Processing of synthetic and paper composites, particularly those used in the manufacture of lint rollers. **System:** system orange is a cantilever machine configuration equipped with a revolver system. Automated from start to finish, the system offers rationalized, six-stage processing: loading of the core, gluing, foil winding, rewinding, applying with protective cover and removal of the finished roll. **Advantages:** Incredibly short cycle times guarantee unmatched productivity. Other features include core feed direct from storage, a perforating unit, shaftless unwinding, protective cover from the roll and automatic jumbo changing. Operating the machine with its six servo drives is made even easier by the latest drive generation from Siemens and a colour touchscreen with PC control.

Specifications
